This event was organized by AICTE and Dewan VS Group of Institutions India.

Accelerating the Demographic Dividend in India through Skill Development in 2024

In the modern era, nations around the globe are embarking on a journey towards digital transformation, leveraging technology to drive socio-economic growth and development. India, with its growing population and rapidly advancing digital landscape, stands poised at the cusp of a transformative phenomenon—empowering the demographic dividend. This phenomenon refers to the potential economic growth that can be unlocked when a country's working-age population surpasses the dependent age groups. However, the realization of this dividend hinges not only on technological advancement but also on strategic investments in skilling, development, and women empowerment.

India, home to one of the world's largest youth populations, holds immense potential in leveraging its demographic dividend to propel economic growth. With a median age of just 28 years, India is poised to reap the benefits of a youthful workforce in the coming decades. However, to harness this potential, concerted efforts are required to equip the youth with the necessary skills and opportunities to thrive as a Global Skill Hub.

The vision of a Digital India entails the seamless integration of technology into various aspects of governance, economy, and society. From digital infrastructure to e-governance initiatives, India has made significant strides in its digital transformation journey.

Skilling and development initiatives are pivotal in empowering the workforce to adapt to the demands of the digital age. By imparting relevant digital skills and fostering a culture of lifelong learning, India can ensure that its workforce remains competitive in the global marketplace. Programs such as Skill India aim to bridge the gap between industry requirements and workforce capabilities, thereby facilitating smoother transitions into the digital economy.

Women's empowerment lies at the heart of India's socio-economic progress. In the digital era, ensuring equal participation and representation of women is a matter of social justice and an imperative for inclusive growth. Skill development initiatives by both the government and the industry, such as targeted CSR or Digital Saksharta Abhiyan (DISHA) seek to empower women through digital literacy and entrepreneurship.

Empowering the demographic dividend toward a Digital India requires a multifaceted approach with skilling, development, and sustainable empowerment. Investing in the education and training of its youth, India can unlock the full potential of its demographic dividend and emerge as a global leader in the digital landscape. As India continues its journey toward digital transformation, prioritizing these key pillars will be essential in realizing the vision of a prosperous and inclusive Digital India.
