TEL/Q6304: Technician - Automatic Train Protection System (ATPS)

Brief Job Description

An ATPS Technician is responsible for performing various activities, such as the installation of Radio Frequency (RF) antennas, Ultra High Frequency (UHF) antennas, feeder cables, and Radio Frequency Identification Tags (RFID) tags. The individual is also responsible for laying, terminating, splicing, and rectifying fibre, optical fibre, and copper cables. The individual also performs mast rigging operations, including mounting and aligning antennas.

Personal Attributes

The individual must be physically fit to work for long duration. The person must have attention to detail and problem-solving skills. The individual should be able to work in coordination with others and communicate appropriately, both verbally and in writing.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [TEL/N2500: High density hand soldering of components on telecom boards](#)
2. [TEL/N4126: Handle fiber Constructs, Performance and Selection Criteria](#)
3. [TEL/N4200: Installation of passive FTTH/X components](#)
4. [TEL/N6400: Splice Optical Fiber](#)
5. [TEL/N0111: Lay cable/system wiring and install equipment at customer premises](#)
6. [TEL/N6210: Perform Change Management at Radio Locations](#)
7. [TEL/N6310: Assist in the Installation of Telecom Equipment](#)
8. [TEL/N6311: Install RFID Tags on Pre-Stressed Concrete \(PSC\) Sleepers](#)
9. [TEL/N6300: Install SDH, DWDM, L2 and L3 Equipment](#)
10. [TEL/N6302: Perform Commissioning of SDH, DWDM, L2 and L3 Equipment](#)

TEL/N2500: High density hand soldering of components on telecom boards

Description

This unit is about skills required to undertake high density hand soldering of components on telecom boards

Elements and Performance Criteria

Preparing board and material/components

To be competent, the user/individual on the job must be able to:

- PC1.** read and understand basics of CAD specifications
- PC2.** set the soldering jig/ fixture as per the work specifications
- PC3.** gather all components to be soldered as per the specifications
- PC4.** set the temperature as per the work and component specifications and measure the same using sensors
- PC5.** select the correct solder bit and soldering wire for the given work
- PC6.** clean solder bits, component leads and boards of any contamination
- PC7.** clean the solder wire of any contamination
- PC8.** select the correct flux as per specifications

Soldering of components on boards

To be competent, the user/individual on the job must be able to:

- PC9.** undertake correct placement and orientation of components and demonstrate (amount of solder feeding, sufficient flux addition, correct positioning and vector speed of nozzle, no solder on gold fingers) while holding the equipment.
- PC10.** regulate soldering temperature throughout the process so that it remains consistent.
- PC11.** maintain solder stations as per the procedure (start and shut down procedures)

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** process and procedures for drawing stores, drawings, specifications and their safe keeping
- KU2.** risk and impact of not following defined procedures/work instructions and timeline
- KU3.** escalation matrix for reporting identified incidents, troubles and/ or emergencies
- KU4.** records to be maintained and implications of non-maintenance of the same
- KU5.** SHE and OHS guidelines and regulations as per company's norms
- KU6.** impact of contamination of PCBs, components and soldering material
- KU7.** cleaning procedures and processes
- KU8.** operational characteristics of soldering stations
- KU9.** impact of temperature and humidity on the process
- KU10.** reading of CAD specifications

Qualification Pack

- KU11.** reading of component specifications
- KU12.** reading of soldering component specifications

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read technical literature/ parameters
- GS2.** read and comprehend part/ pattern/ drawing numbers
- GS3.** read and comprehend component parameters/ specifications
- GS4.** read and understand manuals, requirement documents, health and safety instructions, memos, reports etc.
- GS5.** read and comprehend/ understand material specifications
- GS6.** communicate with colleagues, peers and supervisor
- GS7.** liaising and coordination skills
- GS8.** take decision on re-work, if required
- GS9.** setup work station environment as per the standards
- GS10.** set-up soldering station
- GS11.** set-up all soldering parameters
- GS12.** establish component, flux and other parameter requirements
- GS13.** adhere to workplace health and safety guidelines
- GS14.** interpret soldering temperature requirements
- GS15.** interpret flux type and specifications requirements
- GS16.** properly handle the components during operations and post completion processing

TEL/N4126: Handle fiber Constructs, Performance and Selection Criteria

Description

This OS unit is about identifying and working with various fiber types, understanding specifications of passive components like Fiber Distribution Management System (FDMS), joint enclosure, patch chords, pigtailed, 0dB adapters, attenuators etc. and comply with use/deployment parameters.

Scope

The scope covers the following :

- Carry out Optical Fiber construction and transmission checks
- Identify fiber performance parameters
- Install suitable fiber types and identifiers
- Cable selection criteria

Elements and Performance Criteria

Carry out Optical Fiber construction and transmission checks

To be competent, the user/individual on the job must be able to:

- PC1.** identify fiber cable construct (core, clad, buffer coating)
- PC2.** identify various cable components (fibers, strength members, jackets)
- PC3.** identify and work with strengthening members, rip cords and armored fibers
- PC4.** perform transmission checks for various types of fiber identified (multimode or single mode)

Identify fiber performance parameters

To be competent, the user/individual on the job must be able to:

- PC5.** identify key performance parameters for an optical fiber (attenuation, fiber size and bandwidth)
- PC6.** gauge performance by reading characteristic chart/parameters
- PC7.** identify causes of attenuation (scattering, absorption, fiber bending radius and bending losses)
- PC8.** differentiate between speed and bandwidth
- PC9.** correlate between attenuation and wavelength

Identify suitable fiber types and identifiers

To be competent, the user/individual on the job must be able to:

- PC10.** identify and differentiate various fiber types as per their construction (zip cord, distribution, loose tube, breakout)
- PC11.** identify and differentiate various fiber types as per use (armored, aerial, direct burial, underwater)
- PC12.** deploy suitable fiber type based on deployment and its characteristics
- PC13.** identify cables as per the standard color codes

Cable selection criteria

To be competent, the user/individual on the job must be able to:

Qualification Pack

- PC14.** select appropriate cable as per the criteria - pulling strength, water protection, rodent penetration
- PC15.** demonstrate grounding and bonding for armored cables

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the implication of induced potential and electrical hazards related to Electrical Traction Supply
- KU2.** risk and impact of not following defined procedures/work instructions
- KU3.** escalation matrix for reporting identified incidents, troubleshooting and/or emergencies, e.g. system failures, fire and power failures
- KU4.** Safety Health and Environment (SHE) and Occupational Health and Safety (OHS) guidelines and regulations as per company norms
- KU5.** optical fiber as communication medium
- KU6.** basics of optical fiber manufacturing and construction
- KU7.** optical fiber light transmission basics
- KU8.** cause and effect of reflection and dispersion (modal, chromatic, polarization)
- KU9.** relevance of cut-off wavelength
- KU10.** types of fibers based on core structure - multi-mode and single mode fibers
- KU11.** optical fiber performance parameters and selection criteria
- KU12.** optical fiber specifications

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** write system concepts and flows
- GS2.** maintain records and process documents
- GS3.** read and comprehend technical literature/parameters/performance graphs
- GS4.** read manuals, health and safety Instructions, memos, reports etc.
- GS5.** communicate with colleagues, peers and customers/stakeholders
- GS6.** liaise and coordinate with third party vendors or other stakeholders
- GS7.** plan and organize the work to achieve compliances and results
- GS8.** read customer interaction protocol

TEL/N4200: Installation of passive FTTH/X components

Description

This unit is about installation of passive FTTH/X components like splitters and undertaking basic installation checks

Elements and Performance Criteria

Installation of passive FTTH/X components (Splitter)

To be competent, the user/individual on the job must be able to:

- PC1.** identify components of passive devices (splitters)
- PC2.** demonstrate installation practices for wall mount splitters (1x8, 1x16, 1x32)
- PC3.** identify feeder and distribution ports on the devices

End connections (single incoming/ multiple outgoing)

To be competent, the user/individual on the job must be able to:

- PC4.** identify feeder and distribution cables/pigtails
- PC5.** demonstrate feeder and distribution connections

Power test

To be competent, the user/individual on the job must be able to:

- PC6.** demonstrate insertion loss testing of optical splitters (olts and light source)
- PC7.** demonstrate power output measurement at output port by use of power meter and light source (using olts & light source)

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** risk and impact of not following defined procedures/work instructions
- KU2.** escalation matrix for reporting identified incidents, troubles and/ or emergencies e.g. system failures, fire and power failures
- KU3.** types of documentation in organization and importance of the same
- KU4.** records to be maintained and implications of non-maintenance of the same
- KU5.** knowledge of spare management and repair & return process for faulty equipment
- KU6.** she and ohs guidelines and regulations as per companys norms
- KU7.** passive network components and their deployment environment
- KU8.** principle of operation of optical splitters
- KU9.** concept of feeder and distribution connections in a splitter
- KU10.** types of optical splitters and relative features/limitations
- KU11.** power test procedure and principle

Generic Skills (GS)

Qualification Pack

User/individual on the job needs to know how to:

- GS1.** read technical drawings and relate to on-ground situation
- GS2.** maintain proper records as per given format
- GS3.** read and understand manuals, work orders, health and safety instructions, memos, reports etc.
- GS4.** draft work related technical communication (to vendors, superiors)
- GS5.** effectively communicate with the site team members (technicians, cable installers)
- GS6.** liaise and coordinate with third party stakeholders
- GS7.** interpret test reports, as made route diagrams and other numerical data
- GS8.** create and maintain effective working relationships and team environment
- GS9.** maintain security of site records and other confidential data
- GS10.** work in teams and take initiatives
- GS11.** be flexible and accept changes in job requirements, schedules, or work environments
- GS12.** operate field equipment like power meter, light source
- GS13.** apply relevant standards and practices to the work being carried out at the site
- GS14.** work effectively in customer facing environment
- GS15.** build and maintain a positive environment
- GS16.** approach towards problem solving
- GS17.** check points and problem isolation basics
- GS18.** use tools/techniques to address the problem
- GS19.** analyze test results
- GS20.** analyze effect of results on performance and work out remedial measures
- GS21.** analyze any abrupt test results and investigate the possible cause

TEL/N6400: Splice Optical Fiber

Description

This OS unit is about preparing and carrying out efficient optical splicing.

Scope

The scope covers the following :

- Ensure availability of tools and spares
- Prepare cable for splicing for new installation
- Carry out maintenance of the laid Optical Fiber Cables (OFCs)
- Perform splicing operations

Elements and Performance Criteria

Ensure availability of tools and spares

To be competent, the user/individual on the job must be able to:

- PC1.** ensure availability of optical cable test equipment (Optical Time Domain Reflectometer (OTDR), power meter, etc.)
- PC2.** confirm availability of optical equipment (spool, joint closure, connectors, splicer and cleaver)
- PC3.** check availability of joint kits, pigtails, patch cords, FDF (Fiber Distribution Frame), ODB (Optical Distribution Box) connector, protection sleeves and heat shrink
- PC4.** send faulty equipment to the logistics team for repair or replacement
- PC5.** ensure availability of RCC (Reinforced Cement Concrete) joint chambers with covers and adequate sand as per specifications
- PC6.** confirm availability of one spare cable drum for emergency replacement of laid cables
- PC7.** ensure calibration status of the equipment to be perform (e.g. splicing machine, OTDR, power meter, cleaver)

Prepare cable for splicing for new installation

To be competent, the user/individual on the job must be able to:

- PC8.** identify exact location and fiber/fiber group for which the splicing is to be done as per network route and connectivity plan
- PC9.** inspect cable for sheath damage visually
- PC10.** dismantle/install the fiber joint box/splitter box carefully
- PC11.** ensure maintenance of minimum bend ratios as per manufacturer specifications to prevent cable damage and signal degradation
- PC12.** secure cable in accordance with the industry practices to avoid cable and sheath damage
- PC13.** determine appropriate fibers to be joined based on color coding and sequence
- PC14.** identify an appropriate place for the joint chamber location
- PC15.** clean fiber as per manufacturer specifications

Carry out maintenance of the laid Optical Fiber Cables (OFCs)

To be competent, the user/individual on the job must be able to:

Qualification Pack

- PC16.** identify the route/fiber and location where splicing/maintenance needs to be done in coordination with Fiber Technician/Operation and Maintenance (O&M) team
- PC17.** arrange outage exclusion time (maintenance window timeline) for the fiber and route in consultation with O&M team
- PC18.** visit the site to identify the exact location and fiber/fiber group for which the splicing is to be done
- PC19.** expose the fiber fault point (by digging for trenched fiber, or opening manholes etc., as required)
- PC20.** inspect cable for sheath damage visually
- PC21.** dismantle/install the fiber joint box/splitter box carefully
- PC22.** ensure to maintain minimum bend ratios as per manufacturer specifications to prevent cable damage and signal degradation
- PC23.** secure cable in accordance with the industry practice to avoid cable and sheath damage
- PC24.** determine appropriate fibers to be joined based on color coding and sequence
- PC25.** identify an appropriate place for the joint chamber location
- PC26.** clean the fiber as per manufacturer specifications

Perform splicing operations

To be competent, the user/individual on the job must be able to:

- PC27.** strip cables at areas where splicing has to be performed
- PC28.** cleave fiber with a precision cleaver
- PC29.** inspect cleaved fiber ends with magnifier to ensure appropriateness
- PC30.** insert fiber strands to the fusion machine in accordance with the product/equipment specifications in case of fusion splicing
- PC31.** align fibers together by a precision-made sleeve and place the prepared fiber in mechanical splicing kit in case of mechanical splicing
- PC32.** use proper splice protectors like heat shrink splice protectors to protect the splice

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** spare part management process
- KU2.** repair and return process for faulty equipment
- KU3.** characteristics of Optical fiber like refraction, polarization, attenuation and dispersion
- KU4.** characteristics of wavelength bands in optical fiber
- KU5.** signal strength and quality Key Performance Indicators (KPIs) of OFCs
- KU6.** color coding of fiber optic cable
- KU7.** principles of optical transport media
- KU8.** types of OFC connectors
- KU9.** functioning of optical equipment like cleaver, mechanical and fusion splicing kit, protection sleeves, fiber stripper, fiber reinforced plaster during splicing and jointing
- KU10.** alignment errors during splicing of optical fibers like Lateral, Axial, Angular and Poor end finish

Qualification Pack

KU11. procedure for sealing joints, heat shrinking/multi-diameter seals/mechanical seals etc

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** fill up standard technical forms and activity logs
- GS2.** maintain proper records in the prescribed format
- GS3.** communicate with supervisor and peers
- GS4.** communicate in the local language (preferably)
- GS5.** maintain effective working relationships
- GS6.** use resources efficiently and effectively
- GS7.** execute tasks in a high-pressure environment
- GS8.** be flexible and accept changes in job requirements, schedules, or work environments

TEL/N0111: Lay cable/system wiring and install equipment at customer premises

Description

This OS unit describes the knowledge, understanding and skills required for an individual to lay down the cable/system wiring and install equipment at customer premises.

Scope

The scope covers the following :

- Prepare for wiring and equipment installation
- Undertake wiring and install system hardware
- Clean up worksite and complete documentation

Elements and Performance Criteria

Prepare for wiring and equipment installation

To be competent, the user/individual on the job must be able to:

- PC1.** collect work requirements, tools, equipment and materials required for installation
- PC2.** visit site/customer premises for installation
- PC3.** analyse installation environment and customer requirements to select the correct type of cables and connectors
- PC4.** inspect indoor and outdoor cable route to ensure that the route is free of electrical hazards
- PC5.** verify that the cable running length is within the permissible limit to ensure continuity and designed throughput
- PC6.** verify that the equipment installation location is near power point and has proper signal coverage

Undertake wiring and install system hardware

To be competent, the user/individual on the job must be able to:

- PC7.** install structured wiring (interior and exterior) from PoP to customer premises
- PC8.** perform cable splicing and crimping wherever required
- PC9.** perform neat wiring and clipping within customer premises
- PC10.** use appropriate connectors and ensure that the cables are terminated properly
- PC11.** perform fault clearance
- PC12.** test the cable and joints for transmission loss and strength, re-terminate if loss exceeds prescribed limits.
- PC13.** install equipment such as modem, router and/or switch
- PC14.** demonstrate and explain the use of equipment to customers

Install/replace UPS and check domestic power supply

To be competent, the user/individual on the job must be able to:

- PC15.** perform checks for voltage, current and earthing

Qualification Pack

- PC16.** perform checks for battery in case of a defective UPS
- PC17.** install/replace UPS as per manufacturer's instructions
- PC18.** route the power supply through the UPS
- PC19.** calculate equipment load and compare it with UPS rating

Clean up work site and complete documentation

To be competent, the user/individual on the job must be able to:

- PC20.** dispose of the installation waste properly and restore work site
- PC21.** record the details of installation, test results and update plans
- PC22.** complete all installation documents and get customer signoff

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** process of obtaining cables and equipment from company
- KU2.** different sizes and colors of wires
- KU3.** different types of cables (OFC, UTP, STP, Twisted Pair etc.) and connectors (RJ-45, RJ-11 etc.)
- KU4.** structured cabling norms (pertaining to laying the cables)
- KU5.** process of crimping, splicing of cables of various sizes and types
- KU6.** process of cable laying and connectorisation
- KU7.** process of accurately measuring distances using tapes and other measuring devices
- KU8.** selection of suitable installation location adhering to cabling norms and signal
- KU9.** usage of diagnostic equipment
- KU10.** usage of hand and power tools
- KU11.** escalation matrix for reporting identified incidents, troubles and/ or emergencies e.g. system failures, fire and power failures
- KU12.** functioning of customer premise equipment(modem, routers, switches)
- KU13.** basic computer skills
- KU14.** risk and impact of not following defined procedures/work instructions issued as per SHE & OSH guidelines
- KU15.** records to be maintained and implications of non-maintenance of the same
- KU16.** payment options and procedures

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and understand documents and other materials
- GS2.** interact respectfully with end users/customers
- GS3.** liaise with customers/vendors
- GS4.** communicate in the local language (preferable)
- GS5.** work in coordination with team

Qualification Pack

- GS6.** work systematically with attention to detail and adherence to all safety requirements
- GS7.** maintain proper records as per given format

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Prepare for wiring and equipment installation</i>	12	14	-	2
PC1. collect work requirements, tools, equipment and materials required for installation	2	-	-	-
PC2. visit site/customer premises for installation	1	-	-	-
PC3. analyse installation environment and customer requirements to select the correct type of cables and connectors	3	4	-	1
PC4. inspect indoor and outdoor cable route to ensure that the route is free of electrical hazards	2	3	-	1
PC5. verify that the cable running length is within the permissible limit to ensure continuity and designed throughput	2	3	-	-
PC6. verify that the equipment installation location is near power point and has proper signal coverage	2	4	-	-
<i>Undertake wiring and install system hardware</i>	13	21	-	5
PC7. install structured wiring (interior and exterior) from PoP to customer premises	2	3	-	1
PC8. perform cable splicing and crimping wherever required	1	1	-	-
PC9. perform neat wiring and clipping within customer premises	1	2	-	1
PC10. use appropriate connectors and ensure that the cables are terminated properly	2	3	-	1
PC11. perform fault clearance	2	3	-	-
PC12. test the cable and joints for transmission loss and strength, re-terminate if loss exceeds prescribed limits.	2	4	-	1

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC13. install equipment such as modem, router and/or switch	2	4	-	1
PC14. demonstrate and explain the use of equipment to customers	1	1	-	-
<i>Install/replace UPS and check domestic power supply</i>	9	9	-	3
PC15. perform checks for voltage, current and earthing	1	1	-	-
PC16. perform checks for battery in case of a defective UPS	2	2	-	1
PC17. install/replace UPS as per manufacturer's instructions	2	2	-	1
PC18. route the power supply through the UPS	2	2	-	1
PC19. calculate equipment load and compare it with UPS rating	2	2	-	-
<i>Clean up work site and complete documentation</i>	6	6	-	-
PC20. dispose of the installation waste properly and restore work site	2	2	-	-

TEL/N6210: Perform Change Management at Radio Locations

Description

This OS unit is about carrying out change management activities (system upgrade/site capacity augmentation/re-alignment of antenna/physical optimization) at radio locations.

Scope

The scope covers the following :

- Assess upgradation of infrastructure
- Arrange for tools and spares
- Carry out change and monitor post change
- Report and document the status

Elements and Performance Criteria

Assess upgradation of infrastructure

To be competent, the user/individual on the job must be able to:

- PC1.** receive change requests from the relevant teams (NOC, change management, network planning team)
- PC2.** identify activity type to be performed – hardware upgrade, software upgrade, capacity augmentation, antenna re-alignment, microwave back-up
- PC3.** analyse criticality of the issue and timelines for the resolution before carrying out the changes
- PC4.** prepare a work plan and identify dependencies, if any
- PC5.** assess the potential impact of the proposed activity and plan for possible outage condition or deferral of the activity
- PC6.** inform the Network Operation Centre (NOC) prior to undertake the upgradation activity

Arrange for tools and spares

To be competent, the user/individual on the job must be able to:

- PC7.** ensure that login cables, latest version of equipment specific software and spare hardware equipment like TRX cards are timely available
- PC8.** generate request for spares, in case any spare parts required for change management is not available
- PC9.** perform change management in accordance to organisational process such that faulty equipment/part is sent to the logistics team for repair and/or replacement

Carry out change and monitor post change

To be competent, the user/individual on the job must be able to:

- PC10.** implement ways to ensure that changes are carried as per the change request
- PC11.** monitor continuously and notify the problems if any to the change requestor
- PC12.** develop a contingency plan in case change management do not occur within the anticipated time to ensure minimum service disruption
- PC13.** comply with the defined Service Level Agreement (SLA) for carrying out changes

Qualification Pack

Report and document the status

To be competent, the user/individual on the job must be able to:

- PC14.** complete all administrative tasks post change management like site clearance, return of test equipment etc.
- PC15.** confirm effectiveness of the maintenance process, by monitoring site's alarm status in co-ordination with the NOC team
- PC16.** notify all relevant parties (including Field Management (FM) Engineer, NOC team, supervisors) of the results of the maintenance result and obtain the sign-off from relevant personnel
- PC17.** identify documents to be updated and to be made available for inspection
- PC18.** complete routine maintenance logs, activity logs and spare tracker within stipulated timeline

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** upgradation activities that need to be carried out
- KU2.** login cables (RJ-45, RS-232, and Hi-Speed USB) for different site equipment
- KU3.** spare management and repair and return process for faulty equipment
- KU4.** functionality of site active equipment like microwave, BTS (indoor and outdoor), feeder cables etc.
- KU5.** risks and impact of not following defined procedures/work instructions
- KU6.** types of documentation in the organisation and importance of the same
- KU7.** records to be maintained and implications of non-maintenance of the same

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** interpret reports, readings and numerical data
- GS2.** prioritize and execute tasks in a high-pressure environment
- GS3.** communicate with stakeholders

TEL/N6310: Assist in the Installation of Telecom Equipment

Description

This OS unit is about carrying out various activities to assist in the installation of telecom equipment on tower structures - Ground Base Towers (GBT), Roof Top Towers (RTT), monopoles etc. using rigging and other installation related skills keeping all the safety related equipment handy.

Scope

The scope covers the following :

- Determine the scope of work
- Prepare for the installation of telecom equipment
- Assist in the installation of tower equipment
- Assist in performing Line-of-Sight (LOS) check
- Assist in the shelter room installations
- Assist in completing documentation

Elements and Performance Criteria

Determine the scope of work

To be competent, the user/individual on the job must be able to:

- PC1.** determine the scope of installation work by coordinating with the supervisor and commissioning engineers
- PC2.** analyse the relevant blueprints, schematics and as-built site plan to determine the work requirements
- PC3.** assist the supervisor/field manager by providing appropriate inputs and feedback as required to help achieve the scope of work

Prepare for the installation of telecom equipment

To be competent, the user/individual on the job must be able to:

- PC4.** check the availability of required installation material, tools and equipment, and Personal Protection Equipment (PPE)
- PC5.** examine the installation material, tools and equipment, and PPE to ensure they are not faulty/damaged, and co-ordinate with the supervisor to get them replaced
- PC6.** assist in preparing Radio Frequency (RF) connector and jumper and assembling the relevant telecom equipment for installation, following the supervisor's instructions

Assist in the installation of tower equipment

To be competent, the user/individual on the job must be able to:

- PC7.** carry out antenna assembly, waveguide, and coaxial connector assembly and crimping as per the supervisor's instructions
- PC8.** assist in erecting and securing telecom structures, such as steel towers, monopoles, masts and cable tray installations to facilitate the installation of telecom equipment
- PC9.** assist in the installation of antennas, feeders, microwave dishes, mast head amplifiers and ancillary equipment on steel structures/monopoles/towers, using the appropriate safety equipment to ensure safety at heights

Qualification Pack

- PC10.** carry out the installation of all necessary transmission equipment components including antenna mounts, surge arrestors, eNodeB, gNodeB, transmission lines, connectors or Tower Mounted Amplifiers (TMAs), Call Distribution Unit (CDU) as per the supervisor's instructions
- PC11.** ensure the correct azimuth, elevation, angle and alignment of the transmission equipment, such as antennas, amplifiers, microwave dishes, etc.
- PC12.** carry out the installation of feeder cables, coaxial cables, and high jumpers on steel lattice towers, guyed towers, masts, rooftop and building antennas/aerial systems
- PC13.** assist in the installation of Radio Frequency (RF) antenna system and external RF hardware, such as Remote Radio Units (RRUs), Tower Mounted Amplifier (TMAs), combiners, microwave dishes, etc.
- PC14.** assist in the installation of microwave antennas, such as parabolic 1 to 15 foot, Very High Frequency (VHF), Ultra High Frequency (UHF) antennas
- PC15.** install, connect or test underground or above ground grounding systems as per the supervisor instructions
- PC16.** use coaxial connectors and coaxial preparatory tools appropriately as per the manufacturer's instructions
- PC17.** measure the alignment in azimuth, tilt, roll, and height of antennas using the antenna alignment tool and change the settings as per the instructions given by the RF engineer
- PC18.** carry out bird-proofing and water-proofing of connectors
- PC19.** assist in installing, terminating, earthing, labelling, and testing different types of cables, such as coaxial, Ethernet, feeder and optical fibre cables for the wireless telecom system
- PC20.** assist in installing and testing Outdoor Unit (ODUs), splitters, and Customer Premises Equipment (CPE) as per the supervisor's instructions
- PC21.** assist in ensuring the 3G/4G/5G wireless system is built as per the approved drawing and is operational as per the design
- PC22.** use the compass, Global Positioning System (GPS) receiver, Range Finder and other relevant equipment as per the requirement
- PC23.** assist in carrying out labelling, grounding and sweep testing
- PC24.** carry out Passive Intermodulation (PIM) and sweep testing, following the supervisor's instructions
- PC25.** assist the technicians and Instrumentation & Control (I&C) engineers in undertaking installation rectification for all the equipment installed

Assist in performing LOS check

To be competent, the user/individual on the job must be able to:

- PC26.** assist in performing Line of Sight (LOS) check to ensure signal drop or termination is not experienced
- PC27.** assist in identifying the reason for drop/termination of signal, such as bad cable connection, incorrect network configuration, faulty network device, etc.
- PC28.** follow the appropriate measures to correct the LOS and remove the sources causing obstructions, such as networks and radio noise from other electronic and mechanical equipment around wireless gateways

Assist in the shelter room installations

To be competent, the user/individual on the job must be able to:

- PC29.** perform the shelter room installations as per the supervisor's instructions

Qualification Pack

PC30. carry out cabling and relevant tests on the shelter room equipment to ensure their correct functioning

PC31. carry out troubleshooting for any malfunctioning equipment, as required

Assist in completing documentation

To be competent, the user/individual on the job must be able to:

PC32. assist the supervisor in collecting the relevant information concerning the equipment on towers

PC33. assist in completing the relevant survey reports and documentation for client handover

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the importance of adhering to the applicable safety guidelines during rigging operations
- KU2.** the importance and process of working safely at high elevations, and the use of appropriate safety equipment
- KU3.** different support mechanisms and techniques used to climb and work on different types of towers, such as guyed towers, lattice towers, monopole towers, stealth towers, etc.
- KU4.** the common defects found in various telecom equipment
- KU5.** the importance of identifying and documenting Job Hazard Assessment (JHA) requirements
- KU6.** the benefits of following checklists and Standard Operating Procedures (SOPs), such as efficiency and consistency in work
- KU7.** the importance of determining the client requirements by studying blueprints and carrying out work accordingly
- KU8.** the process of expanding and upgrading a cellular carrier network, involving civil work at existing cellular network sites and change of telecom equipment
- KU9.** the importance and process of carrying out pre and post-work site audits
- KU10.** the benefits and process of upgrading legacy cable plants from coaxial cable to fibre
- KU11.** the importance and process of determining the scope of work and client's requirements
- KU12.** the relevant installation material, tools and equipment, and PPE required for telecom rigging
- KU13.** the process of erecting and securing telecom structures, such as steel towers, monopoles, masts and cable tray installations to facilitate the installation of telecom equipment
- KU14.** the process of preparing Radio Frequency (RF) connector and jumper, and assembling the relevant telecom equipment for installation
- KU15.** the process of installing antennas, feeders, microwave dishes, mast head amplifiers and ancillary equipment on steel structures/ monopoles/ towers
- KU16.** the process of installing feeder cables, high jumpers, Tower Mounted Amplifier (TMA), Call Distribution Unit (CDU), etc.
- KU17.** the process of installing an RF antenna system and external RF hardware, such as RRUs, Tower Mounted Amplifier (TMAs), Combiners, microwave dishes, etc
- KU18.** the process of undertaking installation rectification for all equipment deployed during the project rollout
- KU19.** the process of installing and testing copper and hybrid feeder system
- KU20.** the process of microwave transmission installation and link panning

Qualification Pack

- KU21.** the process of panning/ re-panning antennas
- KU22.** the use of a cable and antenna analyzer for VHF, broadcasting, cellular, PCS/GSM, 3G/4G/5G, Wireless Local Area Network (WLAN) and Wireless Local Loop (WLL) applications
- KU23.** the process of carrying out labelling, grounding and sweep testing
- KU24.** the importance and process of measuring the alignment, azimuth, tilt, roll, and height of antennas using the antenna alignment tool
- KU25.** the process of installing and testing copper and hybrid feeder system
- KU26.** the process of microwave transmission installation and link panning
- KU27.** the process of installing and terminating telecom cables of various types and sizes, as per the requirement
- KU28.** the process of installing, earthing, labelling, and testing of feeder and optical fibre cables
- KU29.** the process of installing and testing Outdoor Units (ODUs), splitters, and Customer Premises Equipment (CPE)
- KU30.** the process of installing mobile/broadcast antenna systems, panel antennas, head frames, hybriflex cables, feeder cables, earthing, cable trays, Remote Radio Units (RRUs), etc.
- KU31.** the process of installing mobile/broadcast antenna systems, panel antennas, head frames, hybriflex cables, feeder cables, earthing, cable trays, Remote Radio Units (RRUs), etc.
- KU32.** the process of carrying out PIM and sweep testing
- KU33.** the importance of ensuring the 3G/ 4G/ 5G wireless system is built as per the approved drawing and is operational as per the design
- KU34.** the process of commissioning and integrating wireless technologies
- KU35.** the process of installing, terminating and testing different types of cables, such as coaxial, Ethernet, and optical fibre cables for the wireless telecom system
- KU36.** the use of compass, GPS receiver, Range Finder and other relevant equipment
- KU37.** the recommended safety practices to be followed while working at heights on a range of telecom structures, including poles, towers and masts
- KU38.** the relevant documentation to be completed for client handover

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** maintain work related notes and records
- GS2.** read the relevant literature to get the latest updates about the field of work
- GS3.** listen attentively to understand the information/instructions being shared
- GS4.** communicate politely and professionally
- GS5.** plan and prioritise tasks to ensure timely completion
- GS6.** co-ordinate with the coworkers to achieve the work objectives
- GS7.** evaluate all possible solutions to a problem to select the best one
- GS8.** take quick decisions to deal with workplace emergencies/accidents

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Determine the scope of work</i>	1	3	-	3
PC1. determine the scope of installation work by coordinating with the supervisor and commissioning engineers	1	1	-	1
PC2. analyse the relevant blueprints, schematics and as-built site plan to determine the work requirements	-	1	-	1
PC3. assist the supervisor/field manager by providing appropriate inputs and feedback as required to help achieve the scope of work	-	1	-	1
<i>Prepare for the installation of telecom equipment</i>	1	3	-	3

TEL/N6311: Install RFID Tags on Pre-Stressed Concrete (PSC) Sleepers

Description

This OS unit is about installing Radio Frequency Identification (RFID) tags on Pre-Stressed Concrete (PSC) sleepers for track identification, correction of train location and identification of train direction.

Scope

The scope covers the following :

- Prepare for the installation of RFID tags
- Carry out the programming of RFID tags
- Install the RFID tags on PSC sleepers
- Carry out documentation and review

Elements and Performance Criteria

Prepare for the installation of RFID tags

To be competent, the user/individual on the job must be able to:

- PC1.** determine the scope of work by studying the relevant documents or co-ordinating with the supervisor
- PC2.** arrange the relevant Personal Protective Equipment (PPE) and installation material, such as RFID tags, RFID Fixing Arrangement, and relevant tools and equipment by co-ordinating with the supervisor
- PC3.** examine the installation material to ensure it is not defective or damaged, and get the defective/ damaged material replaced
- PC4.** check the RFID tags have the appropriate information marked on them, such as RFID number and type, and absolute location
- PC5.** carry out the relevant tests on RFID tags to ensure they are functioning correctly

Carry out the programming of RFID tags

To be competent, the user/individual on the job must be able to:

- PC6.** prepare the RFID tag data using the relevant software
- PC7.** use the portable RFID reader to read the RFID data and carry out programming of RFID tags using the ShowTags software tool

Install the RFID tags on PSC sleepers

To be competent, the user/individual on the job must be able to:

- PC8.** identify PSC sleepers for the installation of RFID tags at the recommended distance on railway tracks
- PC9.** ensure the selected PSC sleepers are not at locations susceptible to water accumulation, and ballast accumulation at the centre of PSC sleeper
- PC10.** install RFID tags at the centre of PSC sleepers using clamps, fasteners and fixing arrangements, ensuring not to drill any holes in PSC sleepers or cause them any damage
- PC11.** follow the recommended measures to protect the RFID tags fixtures from getting submerged in water during the installation

Qualification Pack

- PC12.** ensure the RFID fixing arrangement on PSC sleepers adhere to the recommended dimensions, such as width and height and are safe from any sabotage and damage
- PC13.** conduct the relevant tests after the installation to ensure RFID tags are readable and able to emit RF signals when the corresponding type of RFID antenna is in the vicinity
- PC14.** carry out troubleshooting as per the manufacturer's instructions to resolve any issues experienced with RFID tags or replace them, as appropriate
- PC15.** co-ordinate with the supervisor to resolve any issues out of own limits of authority

Carry out documentation and review

To be competent, the user/individual on the job must be able to:

- PC16.** carry out relevant documentation concerning the work completed, any issues experienced, and the remedial action taken
- PC17.** identify any recurring issues by reviewing the documentation and co-ordinate with the relevant personnel to find their permanent solution

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the importance, functioning and various features of the indigenous Automatic Train Protection System (iATP) - Kavach
- KU2.** the effectiveness of iATP in preventing Signal Passing at Danger (SPAD) cases, and unsafe situations arising due to over speeding of trains and train collisions
- KU3.** the importance of ensuring high speed and low-latency communication between trains and protection systems for real-time tracking and management of trains
- KU4.** the functions of key system components of iATP, i.e. Loco iATP OCIP, Brake Interface Unit, RFID Reader, Station iATP, Radio Tower, Station Master - OCIP (Owner Controlled Insurance Program)
- KU5.** the functioning of relevant signalling and telecommunications equipment used by railways
- KU6.** the communication process between Stationary iATP and Loco iATP
- KU7.** the process through which Loco iATP units installed in the locomotive determine the location of trains by reading pre-programmed RFID Tag data using the RFID reader
- KU8.** the importance of ensuring the RFID fixing arrangement is strong enough to withstand impact during normal ballast unloading
- KU9.** the importance of testing the RFID tags for correct functioning before installation
- KU10.** the process of preparing the RFID data and programming RFID tags using the relevant software
- KU11.** the use of an RFID reader to read the RFID data
- KU12.** the criteria for selecting PSCs for the installation of RFID tags
- KU13.** the process of installing RFID tags and fixing arrangements on PSC sleepers
- KU14.** use of relevant tools and equipment spanner set and fasteners and RFID Programming Kit
- KU15.** the importance of ensuring the RFID fixing arrangement on PSC sleepers adhere to the recommended dimensions
- KU16.** the relevant tests to be conducted to ensure the correct functioning of RFID tags

Qualification Pack

- KU17.** the appropriate troubleshooting to be carried out for common issues experienced with RFID tags
- KU18.** the relevant documentation requirements
- KU19.** the importance of identifying and resolving the recurring issues

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** maintain work related notes and records
- GS2.** read the relevant literature to get the latest updates about the field of work
- GS3.** listen attentively to understand the information/instructions being shared
- GS4.** communicate politely and professionally
- GS5.** plan and prioritise tasks to ensure timely completion
- GS6.** co-ordinate with the co-workers to achieve the work objectives
- GS7.** evaluate all possible solutions to a problem to select the best one
- GS8.** take quick decisions to deal with workplace emergencies/accidents

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Prepare for the installation of RFID tags</i>	9	14	-	6
PC1. determine the scope of work by studying the relevant documents or co-ordinating with the supervisor	2	2	-	1
PC2. arrange the relevant Personal Protective Equipment (PPE) and installation material, such as RFID tags, RFID Fixing Arrangement, and relevant tools and equipment by co-ordinating with the supervisor	2	4	-	1
PC3. examine the installation material to ensure it is not defective or damaged, and get the defective/ damaged material replaced	2	3	-	1
PC4. check the RFID tags have the appropriate information marked on them, such as RFID number and type, and absolute location	2	3	-	2
PC5. carry out the relevant tests on RFID tags to ensure they are functioning correctly	1	2	-	1
<i>Carry out the programming of RFID tags</i>	2	5	-	2
PC6. prepare the RFID tag data using the relevant software	1	2	-	1
PC7. use the portable RFID reader to read the RFID data and carry out programming of RFID tags using the ShowTags software tool	1	3	-	1
<i>Install the RFID tags on PSC sleepers</i>	10	29	-	9
PC8. identify PSC sleepers for the installation of RFID tags at the recommended distance on railway tracks	1	3	-	1
PC9. ensure the selected PSC sleepers are not at locations susceptible to water accumulation, and ballast accumulation at the centre of PSC sleeper	1	3	-	1

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC10. install RFID tags at the centre of PSC sleepers using clamps, fasteners and fixing arrangements, ensuring not to drill any holes in PSC sleepers or cause them any damage	1	5	-	1
PC11. follow the recommended measures to protect the RFID tags fixtures from getting submerged in water during the installation	1	3	-	1
PC12. ensure the RFID fixing arrangement on PSC sleepers adhere to the recommended dimensions, such as width and height and are safe from any sabotage and damage	1	4	-	2
PC13. conduct the relevant tests after the installation to ensure RFID tags are readable and able to emit RF signals when the corresponding type of RFID antenna is in the vicinity	2	4	-	1
PC14. carry out troubleshooting as per the manufacturer's instructions to resolve any issues experienced with RFID tags or replace them, as appropriate	2	4	-	1
PC15. co-ordinate with the supervisor to resolve any issues out of own limits of authority	1	3	-	1
<i>Carry out documentation and review</i>	4	7	-	3
PC16. carry out relevant documentation concerning the work completed, any issues experienced, and the remedial action taken	2	4	-	1
PC17. identify any recurring issues by reviewing the documentation and co-ordinate with the relevant personnel to find their permanent solution	2	3	-	2

Qualification Pack

TEL/N6300: Install SDH, DWDM, L2 and L3 Equipment

Description

This OS unit is about carrying out installation of SDH, DWDM, L2 and L3 equipment for the sites proposed by the planning team.

Scope

The scope covers the following :

- Prepare for installation
- Connect power and traffic cable to the equipment
- Record and report installation status

Elements and Performance Criteria

Prepare for installation

To be competent, the user/individual on the job must be able to:

- PC1.** verify availability of all line items required for installation and match with Bill of Material (BOM)
- PC2.** check availability of installation kit/racks required for the installation as mentioned in the installation guide
- PC3.** access installation plan from the planning team, interpret it and recommend any modifications in the plan
- PC4.** determine if any additional equipment, accessories are needed for installation
- PC5.** ensure proper order and sequence of equipment in the rack
- PC6.** maintain adequate space between equipment in the rack and for cable routing

Connect power and traffic cable to the equipment

To be competent, the user/individual on the job must be able to:

- PC7.** identify appropriate MCBs to be used at the rack for the installation as per power consumption of the equipment
- PC8.** verify that the MCB has -48V DC and Ground connectivity with the equipment
- PC9.** identify appropriate optical patch cords and electrical cables to be used
- PC10.** perform connection and routing of power cable and traffic cable properly
- PC11.** mark traffic cables with appropriate printed stickers
- PC12.** follow precautions to avoid damage to cables and connectors during connecting and disconnecting
- PC13.** communicate installation progress to the Project Manager

Record and report installation status

To be competent, the user/individual on the job must be able to:

- PC14.** prepare installation report in specified format with all relevant information
- PC15.** obtain signature on the installation report from the appropriate authority
- PC16.** ensure that all required documents are timely updated after completion of a job/task

Qualification Pack

PC17. ensure documents are available to all appropriate authorities

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** basic equipment category
- KU2.** site installation checklist and critical punch points
- KU3.** risk and impact of not following defined procedures/work instructions
- KU4.** equipment dimension from installation guide
- KU5.** usage of cable connectors, cable ties and cable tray
- KU6.** types of login cables (RJ45, RS232, High Speed USB) required to login on the core nodes
- KU7.** need, requirement and process of earthing the equipment.
- KU8.** mechanism to maintain the earthing pit to absolute zero
- KU9.** types of documentation in organization and importance of the same

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret necessary documents
- GS2.** liaise and coordinate with third party vendors/other stakeholders
- GS3.** use and maintain resources efficiently and effectively
- GS4.** multitask by handling multiple tasks and completing them successfully with due timeline
- GS5.** prioritize and execute tasks in a high-pressure environment
- GS6.** maintain proper records as per given format

TEL/N6302: Perform Commissioning of SDH, DWDM, L2 and L3 Equipment

Description

This OS unit is about carrying out commissioning of SDH and DWDM equipment for the sites where equipment installation and site acceptance testing has been successfully completed

Scope

The scope covers the following :

- Assess network topology to develop commissioning plan and test procedure
- Configure and test the equipment, and record test details

Elements and Performance Criteria

Assess network topology to develop commissioning plan and test procedure

To be competent, the user/individual on the job must be able to:

- PC1.** interpret SDH/DWDM/LAN/WAN network topology, basic features and working functionality of the equipment
- PC2.** analyse ways to provision equipment as per the requirements and specifications
- PC3.** prepare step-by-step commissioning plan for the equipment and record the guidelines in specified format
- PC4.** develop a test procedure for the commissioned equipment and document the same
- PC5.** verify power cable connectivity with the equipment and switch it on

Configure and test the equipment, and record test details

To be competent, the user/individual on the job must be able to:

- PC6.** configure the equipment as per commissioning guide
- PC7.** verify the configuration checklist as per commissioning guide
- PC8.** test the commissioned equipment with the help of SDH and PDH test cases
- PC9.** update the test report timely for the commissioned equipment as per the test result
- PC10.** ensure completion of administrative jobs like site clearance, return of test equipment after successful commissioning
- PC11.** ensure commissioning and test documents are timely updated
- PC12.** ensure that the updated commissioning and test documents are available to all appropriate authorities for further inspection

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** OSI, LAN, WAN and MAN architecture and protocols
- KU2.** basic equipment design and application
- KU3.** Internet and IP protocol and VLAN concepts

Qualification Pack

- KU4.** Ethernet networking, media and connector functioning
- KU5.** types of documentation in organization and importance of the same
- KU6.** records to be maintained and implication of non-maintenance of the same

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and comprehend different types of information
- GS2.** write as per pre-defined format
- GS3.** interpret test results and undertake appropriate steps
- GS4.** prioritize and execute tasks in high pressure environment
- GS5.** utilize appropriate communication channels to escalate unresolved problems

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification Pack will be created by the Sector Skill Council. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each Element/PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.
4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).
5. Individual assessment agencies will create unique evaluations for skill practical for every student each examination/ training center based on these criteria.
6. To pass the Qualification Pack assessment, every trainee should score the Recommended Pass % aggregate for the QP.
7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification Pack.

Qualification Pack

Minimum Aggregate Passing % at QP Level : 70

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Compulsory NOS

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
